Nithin Das, Date: 04/13/2020, CWID: 10422784

Using the "Duke—Bear sales" dataset in CANVAS, develop price elasticity models for 18 pack (18pk) and 30 pack (30 pk) weekly beer sales.

Solution:

1. Linear Elasticity Model for 18PK

- Here, in Percent v/s Residual plot, Residuals follow Normal distribution, even though not perfect.
- In Residual v/s Quantile plot, residuals do not fit the line well.
- In Residuals v/s Predicted value, the variances or standard deviation of the errors is not constant. For smaller x, values are tied together, but for larger x, it has spread.

| Number of Observations Read | 5 2 |
|------------------------------------|--------|
| Number of Observations Used | 5 |
| | 2 |

| Analysis of Variance | | | | | | | |
|--|----|---------|-------------|--------|--------|--|--|
| Source Sum of Mean Square F Value Pr > | | | | | | | |
| Model | 1 | 2564637 | 256463 7 | 150.53 | <.0001 | | |
| Error | 50 | 851885 | 17038 | | | | |
| Corrected Total | 51 | 3416521 | | | | | |

| Root MSE | 130.5285 | R-Square | 0.750 |
|-----------------------|----------|----------|-------|
| | 3 | | 7 |
| Dependent Mean | 256.6730 | Adj R-Sq | 0.745 |
| | 8 | | 7 |
| Coeff Var | 50.85400 | | |

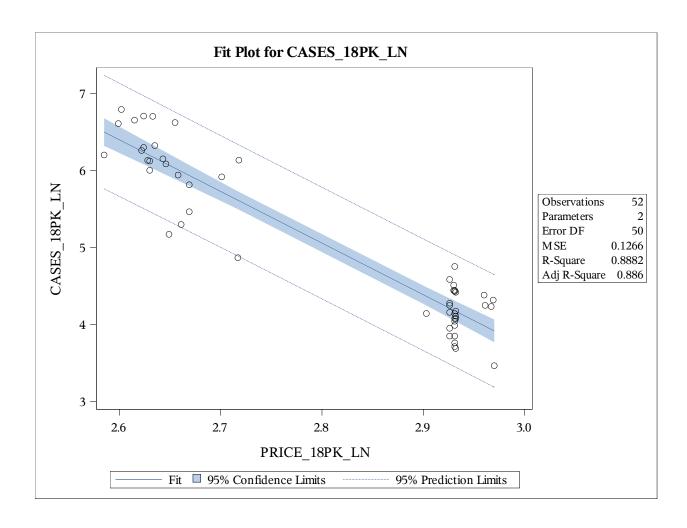

| Parameter Estimates | | | | | | | |
|---------------------------------|---|----------------|---------------|--------|--------|--|--|
| Variable Parameter Standard | | | | | | | |
| Intercept | 1 | 1812.1839 4 | 128.0699 5 | 14.15 | <.0001 | | |
| PRICE_18PK | 1 | -93.00727 | 7.58070 | -12.27 | <.0001 | | |

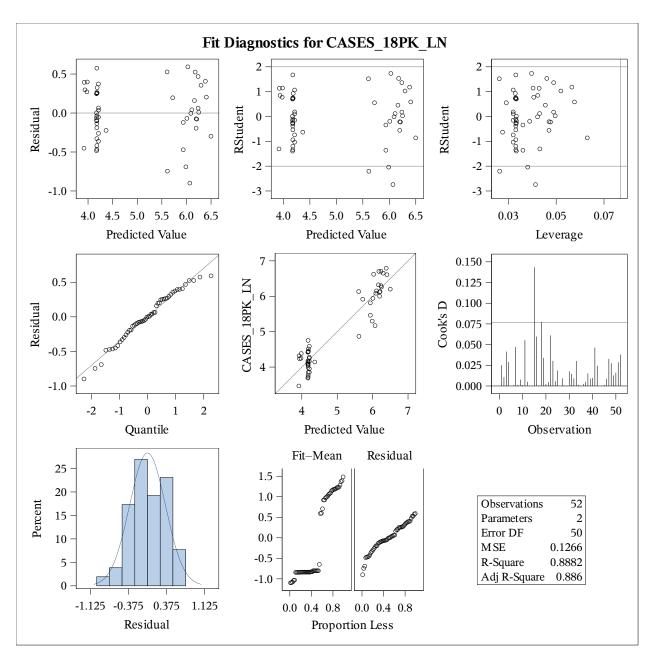

In Analysis of Variance, Probability <0.0001, which means F value is significant, overall model is good.

The regression equation is :

Quantity= 1812.18-93.007*Price

2. Log Elasticity Model for 18PK

- Here, in Percent v/s Residual plot, Residuals follow Normal distribution better than Linear Model.
- In Residual v/s Quantile plot, residuals fit the line well.
- In Residuals v/s Predicted value, the variances or standard deviation of the errors is almost constant.

| Number of Observations Read | 5 |
|------------------------------------|---|
| | 2 |
| Number of Observations Used | 5 |
| | 2 |

| Analysis of Variance | | | | | | |
|------------------------|----|----------------|--------------|---------|--------|--|
| Source | DF | Sum of Squares | | F Value | Pr > F | |
| Model | 1 | 50.2852 | 50.2852 1 | 397.19 | <.0001 | |
| Error | 50 | 6.33017 | 0.12660 | | | |
| Corrected Total | 51 | 56.6153 9 | | | | |

| Root MSE | 0.3558 | R-Square | 0.888 |
|-----------------------|--------|----------|-------|
| | 1 | | 2 |
| Dependent Mean | 5.0143 | Adj R-Sq | 0.886 |
| | 7 | | 0 |
| Coeff Var | 7.0958 | | |
| | 9 | | |

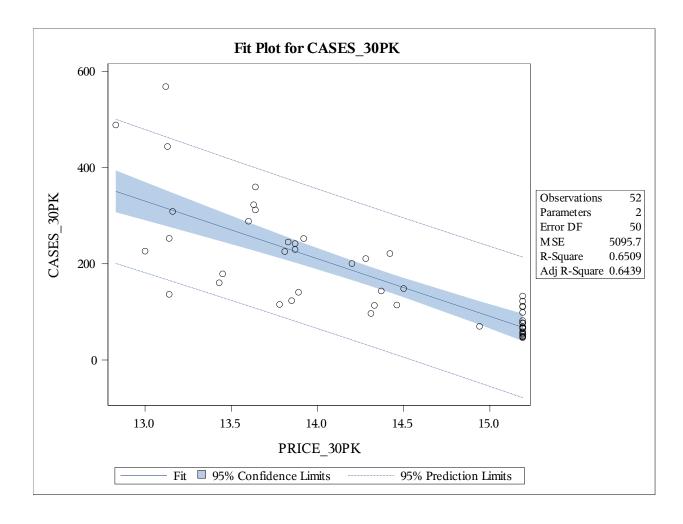

| Parameter Estimates | | | | | | | |
|--|---|----------|---------|--------|--------|--|--|
| Variable Parameter Standard Error t Value Pr > | | | | | | | |
| Intercept | 1 | 23.82853 | 0.94532 | 25.21 | <.0001 | | |
| PRICE_18PK_LN | 1 | -6.70420 | 0.33639 | -19.93 | <.0001 | | |

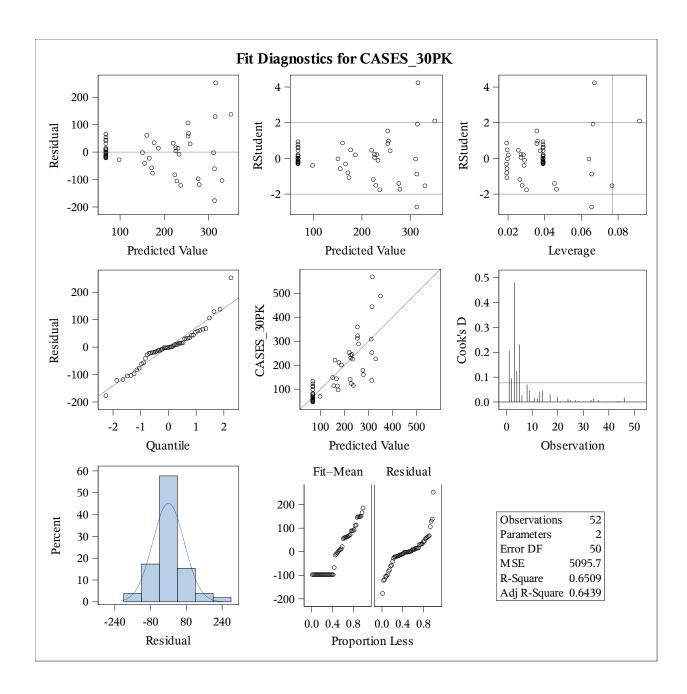

In Analysis of Variance, Probability<0.0001, F value is significant, overall model is good. Log equation for elasticity model:

Log(Quantity)= 23.82-6.70*log(Price_18PK)

Comparing both models, we can say that Log models fits better than Linear model for 18PK

3. Linear Elasticity Model for 30PK

- Here, in Percent v/s Residual plot, Residuals follow Normal distribution.
- In Residual v/s Quantile plot, residuals fit the line well, even though not perfect.
- In Residuals v/s Predicted value, the variances or standard deviation of the errors is not constant. For smaller x, values are tied together, but for larger x, it has spread.

| Number of Observations Read | 5 2 |
|------------------------------------|--------|
| Number of Observations Used | 5 2 |

| Analysis of Variance | | | | | | | |
|------------------------|---|--------|----------------|-------|--------|--|--|
| Source | Sum of DF Squares Square F Value Pr > F | | | | | | |
| Model | 1 | 475027 | 475027 | 93.22 | <.0001 | | |
| Error | 50 | 254786 | 5095.7261 7 | | | | |
| Corrected Total | 51 | 729814 | | | | | |

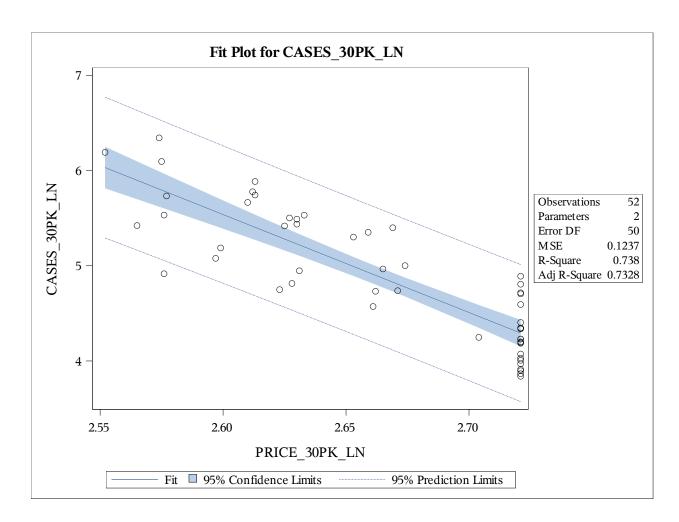

| Root MSE | 71.38436 | R-Square | 0.650 9 |
|-----------------------|---------------|----------|------------|
| Dependent Mean | 165.0432 7 | Adj R-Sq | 0.643 |
| Coeff Var | 43.25190 | | |

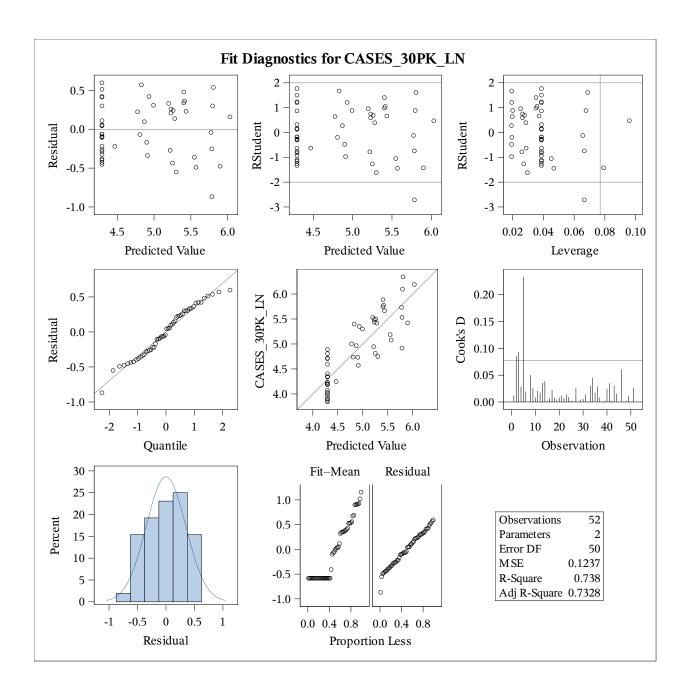

| Parameter Estimates | | | | | | |
|---------------------|----|---------------------------|----------|-------|--------|--|
| Variable | DF | t Value | Pr > t | | | |
| Intercept | 1 | Estimate 1887.2558 | | 10.56 | | |
| | | 0 | 3 | | | |
| PRICE_30PK | 1 | -119.77084 | 12.40494 | -9.66 | <.0001 | |

In Analysis of Variance, Probability <0.0001, which means F value is significant, overall model is good.

The regression equation is:

4. Log Elasticity Model for 30PK

- Here, in Percent v/s Residual plot, Residuals do not follow Normal distribution well as Linear model
- In Residual v/s Quantile plot, residuals do not fit the line well.
- In Residuals v/s Predicted value, the variances or standard deviation of the errors is not constant.

| Number of Observations Read | 5 2 |
|------------------------------------|--------|
| Number of Observations Used | 5 2 |

| Analysis of Variance | | | | | | | | |
|------------------------|----|----------------|--------------|---------|--------|--|--|--|
| Source | DF | Sum of Squares | | F Value | Pr > F | | | |
| Model | 1 | 17.4185 7 | 17.4185 7 | 140.84 | <.0001 | | | |
| Error | 50 | 6.18384 | 0.12368 | | | | | |
| Corrected Total | 51 | 23.6024 | | | | | | |

| Root MSE | 0.3516 | R-Square | 0.738 |
|-----------------------|-------------|----------|------------|
| Dependent Mean | 4.8757 | Adj R-Sq | 0.732 8 |
| Coeff Var | 7.2128 1 | | |

| Parameter Estimates | | | | | | |
|---------------------|----|-----------------------|---------|---------|---------|--|
| Variable | DF | Parameter Estimate | | t Value | Pr > t | |
| Intercept | 1 | 32.28454 | 2.31007 | 13.98 | <.0001 | |
| PRICE_30PK_LN | 1 | -10.28726 | 0.86684 | -11.87 | <.0001 | |

In Analysis of Variance, Probability<0.0001, F value is significant, overall model is good.

Log equation for elasticity model:

Log(Quantity)= 32.28-10.28*log(Price_30PK)

Comparing both models, we can say that Linear models fits better than Log model for 30PK
